

Preliminary interview with client on 16/9/14 at 22:00 PM

1. See spec
2. Lots of stuff, time consuming, very technical, limits who can operate who can operate the system
3. See spec
4. Partial record 89-96, full record from 97, total data approx 0.3TB
5. all existing data + 24 events a year each event can have * up to 40 riders
6. 24 times a year, ASAP after each event, expected level of service is within 24 hours after the event
7. Record will need to be added weekly during the season, old record will never be needed to be deleted
8. backends after each event
9. data is key but no personal data is recorded
10. see spec, main is names, clubs, h.caf, times, Pb (fastest time over last 2 years on 10m, 25m and circuit), calculate h.caf ect.
11. same as above, maintain current functionality
12. X
13. See spec sheet
14. inserting riders names and clubs, start number, watch time, event data, career code (which career), event code (code) 160614 (unic ID)

```
graph TD
    A["160614 (unic ID)"] --> B["type of event (transmission)"]
    A --> C["date 16/06/14"]
```
15. See spec
16. See 14
17. See table 1
18. " " "
19. No, live online system only
20. 2TB NAS, see Pdf
21. rather not, prefer to be within current capabilities
22. Password Protected database non-encrypted
23. back end data base should be admin only, user specific for uploading data.
24. manually corrected
